Declaration

This is my own work as defined in the Academic Ethics agreement I have signed.

A brief report in PDF outlining the state of your solution and identifying any bugs or limitations you are aware of. It is important that the report is accurate. It is offensive to report that everything works when it does not even compile:

Bugs and limitations:

In date.c file, I wrote my date_create and date_duplicate like this:

```
Date *date_create(char *datestr){
	Date *d = malloc(sizeof(d));
	if (d == NULL) {
		return NULL;
	}
	sscanf(datestr, "%d/%d/%d", &d->day, &d->month, &d->year);
	return d;
}

Date *date_duplicate(Date *d){
	Date *du = malloc(sizeof(du));
	if (du == NULL) {
		return NULL;
	}
	du->day = d->day;
	du->month = d->month;
	du->year = d->year;
	return du;
}
```

I did not noticed that my malloc in date_duplicate was wrong, I did not understand malloc well.

When compiling the program, I received errors like this:
ccmip9jK.o:tldmonitor.c:(.text+0x12a): multiple definition of `main'
There should not be main function in date.c so I deleted it.

In the tldlist.c file, I did not noticed that some pointers should be pointers of pointers, which have two star(**)

When compiling, I received unrelated message about date comparing, it was caused by the printf command in my date_compare in date.c file. I deleted it.

Results and outputs:

The following commands should yield NO output if you have implemented your ADTs correctly:
./tldmonitor 01/01/2000 01/09/2020
./tldmonitor 01/01/2000 01/09/2020

There is no output of the commands.

I tried compile it with gcc date.c tldlist.c tldmonitor.c -o tldmonitor in the school server, it successfully compiled.
Command: ./tldmonitor 01/01/2002 31/12/2002 small.txt
Output:
11.11 fr
22.22 com
11.11 de
55.56 uk
